Math Foundations

WORKSHOPS + ONE-ON-ONE

Woodlands Test Prep

Build the math skills for SAT & ACT success.

We've chosen the most important academic building blocks for success on the SAT and ACT: number skills, algebra, functions, and geometry. Your student gets a chance to make connections, understand why the math works, and build skills that carry into the classroom, too.

Yes, math can be fun!

We bring math to life through hands-on activities, fun games, and friendly team challenges. Students tackle concepts, talk through their reasoning, and learn with their classmates. There are discoveries, plenty of "Oh, I get it!" moments, and so much laughing! 🤣

What we'll work on together

Build number confidence

Strengthen ratios, percents, averages, and proportional thinking.

Make algebra click

Work with equations, lines, and systems while connecting symbols to graphs.

Understand functions

Explore how functions work and what quadratic graphs can tell us.

Bring geometry into focus

Connect circles, similar triangles, and basic trigonometry.

Give your student a chance to ask questions, strengthen essential skills, and approach math with more confidence before tackling test-specific preparation.

2011 15 YEARS 2026 ANNIVERSARY
